

EXPERIENCE IS... EVERYTHING.

Having experienced professionals who have designed, operated and maintained acid plants as part of your turnaround team adds value by saving time and capital, ensuring consistent operation.

This is achieved by applying the knowledge gained through training and prior experience, through the strength of our organization and from other operating plants to identify and resolve maintenance, operation and technical problems. Proven repair strategies and troubleshooting solutions can be implemented with confidence.

Reach out to our team to discover our expert solutions for your operational and maintenance challenges. We have the know-how and, most importantly, we have the experience.

- **Troubleshooting** - Technology experts experienced in design and operations help identify the root of process and mechanical issues, and recommend solutions.
- **Turnaround inspections** - Equipment specialists available to be part of your turnaround team allow quick identification and resolutions of equipment issues.

- **Failure analysis** - Corrosion and material specialists identify root causes of equipment failure and recommend corrective actions to prevent recurrence.
- **Mechanical integrity** - Equipment specialists assist in mechanical integrity inspections to maintain and improve OEE (Overall Equipment Effectiveness).
- **Technical studies and process optimization** - Process specialists review existing operations and recommend modifications to improve or expand production.
- **Replacement equipment engineering services** - Design, project management, QC / QA and component fabrication ensures work is done correctly from the start.
